The thermostat installed outside would have the ability to obtain the real-time data from the inside and capture all environmental factors we are focused on. This would also be uploaded on the computer or have someone walk there to get the readings.

If this were to obtain the data by exporting it to the computer, it would give us less of a hassle to do so.

This would be the cheaper option if we do not have anything else. It would allow us to be present in the shed and provide accurate measurements.
