

Professional Development Plan: Haining

Topic: My team is using environmental sensors, but I haven't worked with sensors extensively/only worked with light sensors

Benefit: We need them to control the environment in the shed, so learning how to properly use them, i.e. calibrating, reading, and parsing the data correctly, is necessary.

Method: I will research the specific sensor model for correct usage, and look at tutorials for how those sensors interface with certain programming languages.

Due date: By the end of the system level design phase.
