

**Team:** P21389 **Engineer:** Owen Straub

**What were the outcomes of the prior phase?**

1. What did I plan to do?
  - a. Integrate the subsystems after testing the solar and capacitive systems.
2. What did I actually do?
  - a. I achieved these goals and got to some testing of the system.
3. What did I learn? How were plan and reality different?
  - a. Integrating systems that work apart does not mean that they will work together.

**Team level goal for next phase**

For phase 8 I plan to make a detailed list of improvements and documentation on the system to ensure the customer can use the material we have developed and improve upon it.

**What do I plan on doing to ensure that my team has a successful review at the end of the next phase?**

Task	Details	Timeline
Create User Guides	Describe each system and then create a list for areas of improvement.	10-15 hours
Help with poster/paper/video	Make sure they get done well and on time.	5 hours
More system testing.	Fix some small system issues.	5 hours

**What is standing in my way of meeting my next phase goals?**

Just the amount of free time I have. I am running very low on energy after this tough semester.
