Revision 1.1	Date 6/10/13	Sheets 2

- The USB cable for the camera has the power line cut and has two leads soldered to them, which run into the relay in Input 2-Input 7.
- Relay pins 2-7 then run to the bread board, connected to pin 10 of the Arduino.
- When the Arduino fires, it turns off channel 3 and turns on channel one, breaking the circuit.
