

Third-Party Integrations

This documentation outlines the third-party integrations with myCourses such as those available from major textbook publishers.

The use of third-party integrations in courses is at the discretion of the instructor with the understanding that many of these of these tools have support and documentation provided by their publisher, not RIT's Academic Technology Support. Most third-party integrations are not actively monitored by RIT's Academic Technology Support and may be subject to unexpected changes or service interruptions from their publishers.
