

Week 15: Payload Selection

Thank you for everyone who attended today's meeting. Below is the results of our payload review
https://docs.google.com/spreadsheets/d/1dzMaM1TQ6q_b1FAZ9Tsh0-zFBH0vM5Z9TFakktij0E/pubhtml

We decided to hold voting for payloads remotely, so that everyone can have input. The poll will close **Tuesday May 17th at midnight**.

Remember to consider this will be our main payload for the CSLI proposal and that the payload is just a small part of the overall engineering challenge for the cubesat mission.

The three payloads are:

- Radiation Memory Test
- Electrodynamic Tether
- Atmospheric Re-entry
