

Denton Sputter

Facts

- The Denton Desk II Sputter Coater is a table top sputter system designed for coating SEM samples with a gold film
 - It is **not** for anything other than depositing very thin films of gold on SEM samples.
- The system has a small round platen that the samples rest on. It can accommodate many types of substrates provided that they are not much larger than 2" in diameter.

Personnel

- Tool Engineer - [Rich Battaglia](#)
- Process Engineer - [Sean O'Brien](#)
